is the number of results predicted by chance to have a Pred. No.

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NOTE: This is a 'working draft' sequence. It currently consists of 66 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                               Submitted (09-NOV-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

NOTE: This is a 'working draft' sequence. It currently
consists of 53 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               in length

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats: all regions were covered by at least one plasmid subclone or more than one M13 subclone: and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; WP:, WORMPEPP: Information on the WORMPEPP.

Submitted (29-NOV-2001) Wellcome Trust Sanger Institute, Hinxton, Cambridgeslire, CB10 15A, UK. E-mail enquiries:
hunquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On NOV 30, 2001 this sequence version replaced gi:16973v2.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate constitution of the overlapping clone as we seem that an alternate chemistry or covered by high quality data (i.e., phred quality >-
                                                                                                                                                                                                                                                                                                                                      18170 CCGCCCCACTGTTGCATTTCCAGCTGCCGCCCCAGCTGCTGCTGCAGGCCAACTGCTG 18229
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMNIL: SW.; SWISSPROT; Tr., TREMBL: WP:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ROD 29-NOV-2001

(see http://www.hysc.hcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently
consists of 32 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                       Estimated insert size: 172965; sum-of-contigs estimation Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
                                                                                                                                NOTE: Estimated insert size may differ from sequence length
                                                                                                                                                                                                                       arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      unknown length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N.Alternate names: UHS keratin; ultra high-sulfur matrix protein C.Species: Homo sapiens (man)
C.Accession: S18946; B3686
R.Drabent, B.; Doenecke, D.
Submitted to the EMBL Data Library, December 1991
A.Description: Nucleotide sequence of a Human high-sulphur keratin cDNA.
A.Reference number: S18946
A.Molecule type: mRNA
A.Residues: 1.169 CDRA
A.Molecule type: mRNA
A.Cross references: EMBL:X63755; NID:932471; PIDN:CAA45283.1; PID:932472

A. Molecule type: protein
A. Residues: 2-172 < FLL>
A. Residues: 2-172 < FLL>
A. Residues: 2-172 < FLL>
A. Note: a minor component has 13-Thr, 23-Asn, and 24-Phe
C. Comment: The keratin products of mammalian epidermal derivatives such as wool and h
fur and high-tyrosine keratins, having molecular weights of 6-20 kilodaltons, whereas
C. Superfamily: keratin high-sulfur matrix protein IIIA
C. Keywords: acetylated amino end: blocked amino end: duplication; hair
F: 2-172/Product: keratin high-sulfur matrix protein B2A #status experimental <MAT>
F: 27-76/Region: 10-residue repeats
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RyPowell, B.C.; Sleigh, M.J.; Ward, K.A.; Rogers, G.E.
